

HY-TOWER™

C O V E R I N G S Y S T E M S

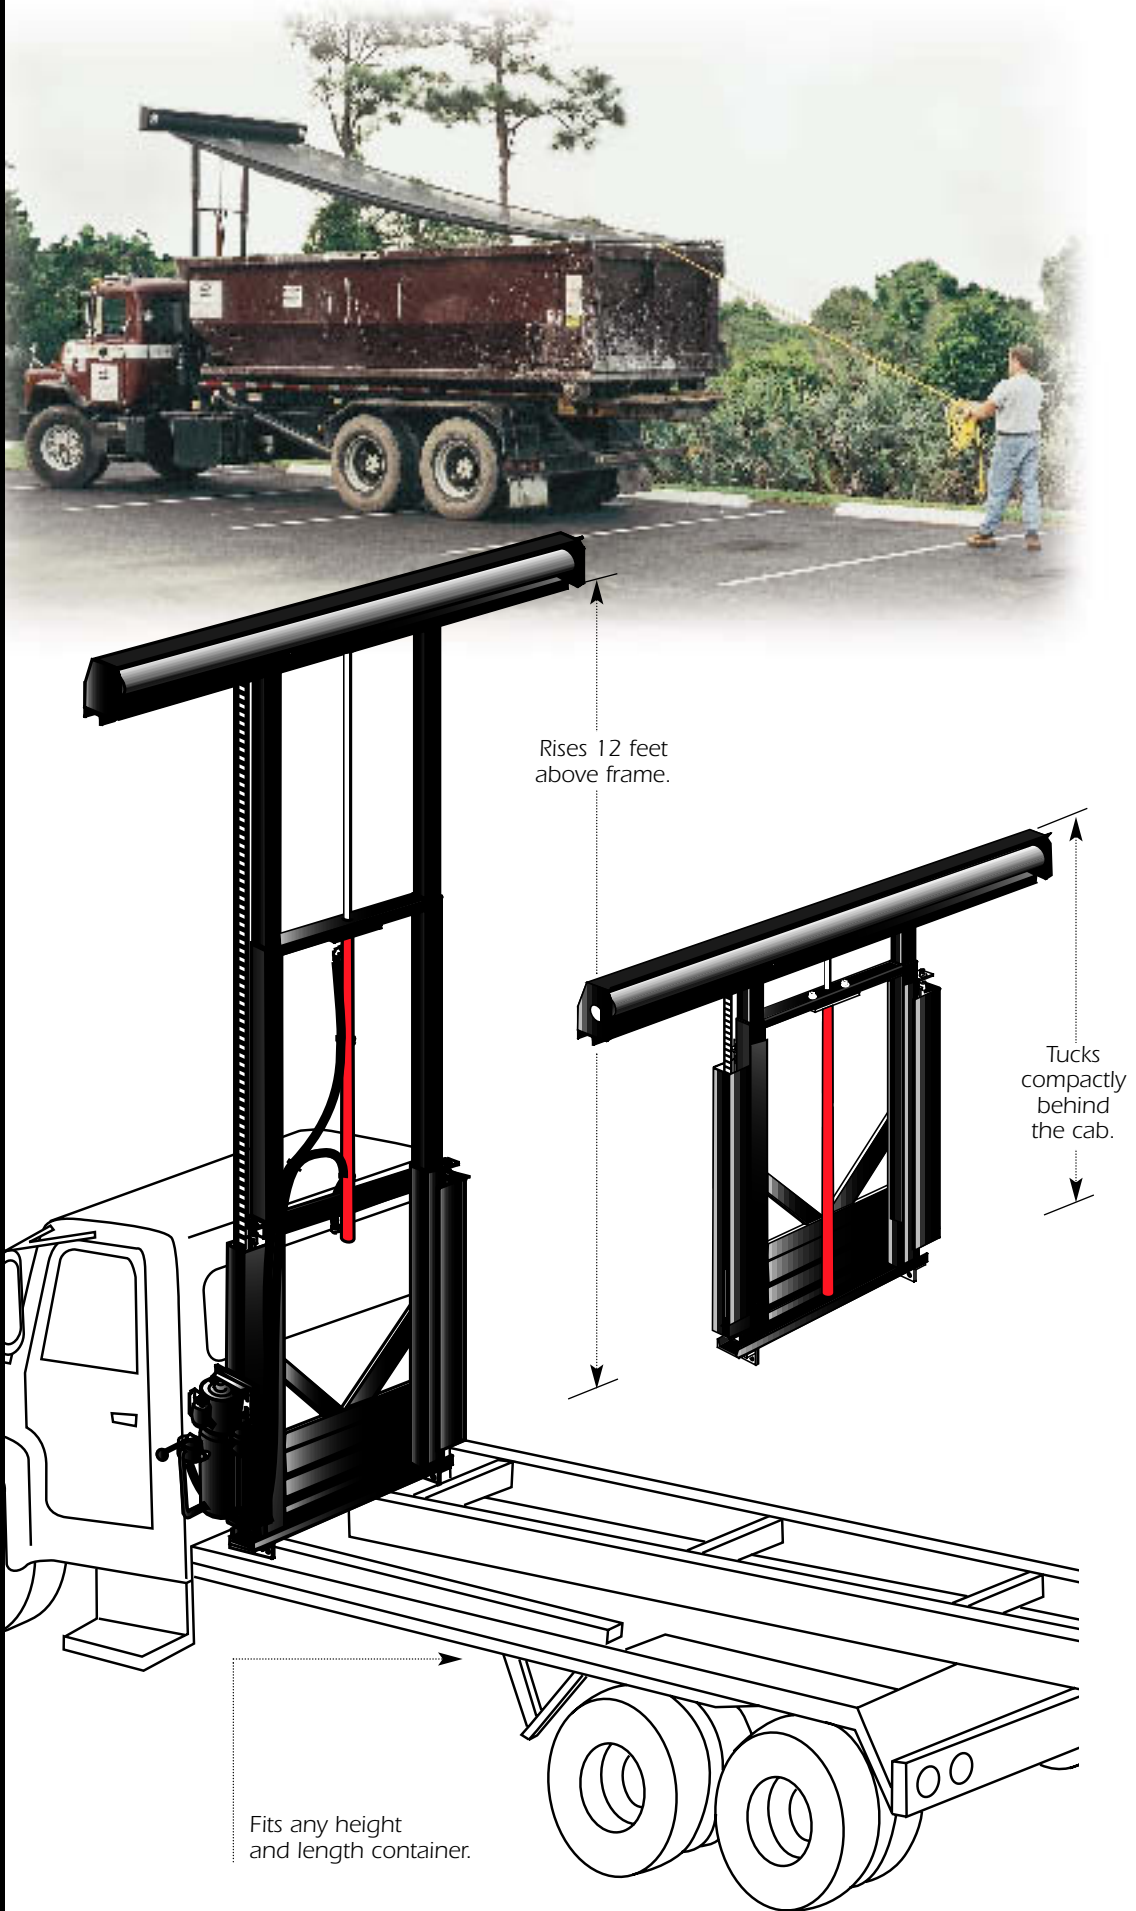

Donovan

RAISES THE STANDARD

► **Introducing the first hydraulic pull-over covering system for the waste industry. Towering 12 feet above the frame to clear the tallest loads without the need for arms, and tucking compactly behind the cab during transportation.**

► **HY-TOWER™ is Donovan's response to the industry's need for a simple to operate, low maintenance, low cost alternative to arm systems.**

The system comes fully assembled, ready to install and features simple pull-over operation with automatic tarp return.

With no fragile side arms and cylinders, the HY-TOWER™ has been engineered for durability and extremely low maintenance.

The tarp and housing rise to a height of 12' over the vehicle frame in order to clear peaked loads and tall containers.

The HY-TOWER™ is the best response to the industry's need for a simple, fast, durable and economical tarping system.

"The HY-TOWER™

is a great alternative to traditional arm style tarpers. It is about half the cost, it takes less

than half the time usually needed for installation and it requires minimal

maintenance. It is very simple and very safe."

My customers love it!
